

Get food randomly in 1-2 minutes

Randomly choose whether to get drinks in the beverage machine in 1-2 minutes

Randomly choose whether to get snaps from snapssuppliers in 30s

Get check in 20s

```
def snaps_stock_control(self, env):
    yield env.timeout(0)
    while True:
        if self.snap.level <= snaps_critical_stock:
            print('snaps stock below critical level ({})'.format(
                self.snap.level))
            print('calling snaps supplier')
            print('-----')
            yield env.timeout(5)
            print('snaps supplier arrives')
            yield self.snap.put(50)
            print('new snaps stock is ({})'.format(
                self.snap.level))
            print('-----')
            yield env.timeout(45)
        else:
            yield env.timeout(20)
```

Add a snaps stock alarm
